

## PROCESS WORK

### START% Collisions %

Learning to use gitHub is quite a challenge. Its really confusing to navigate and going back and forth between the Browser version and desktop.

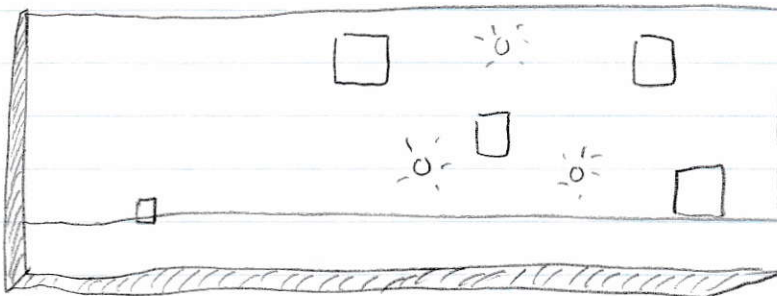

The "OH MyGit" game got me familiar with the actions but when actually trying to use the actions is more difficult then I thought even after playing the game.

We started to get ideas for the game and set up a trello board to help assign tasks.

→ I started working on collisions and ran into issues trying to actually pull the file. I kept get errors and when I got a file and tried to make changes it would not show them saying the Binary had moved. I Also noticed that I Had 30+ changes with nothing showing on any of them. I comitted what I thought was the changes, but when I went back to our repository the showed as something completely different.

→ I managed to make progress on the collisions class and got it with no errors

-7 Can't get into Github ☒ fixed ☐ not Fixed

→ Having alot of trouble with Git, gonna submit what I can.  
Hopefully I get some marks that arent horrible

## PROGRESS

- Got github up
- started class
- added code  
with no errors

## Problems

- github is confusing
- not pulling and pushing the  
wrong things

Weird changes showing up with  
no binary

- need to submit what I have
